<u>Gradients</u>

First:

Create five different gradients, one of each, using different color swatches each time:

1) **Linear**
2) **Radial**
3) **Angle**
4) **Reflective**
5) **Diamond**

Second:

Using only one picture – can use one of mine:) – create five cool effects with your gradient modes. Yes, this means you will have five effects/gradients. Same picture – turned into five wacky pictures.

1) **First, open picture in photoshop**
2) **pick gradient color/type**
3) **pick mode – "overlay" or "hard mix" for example**
4) **create gradient over pic**

Save all works of art in a folder called gradient_student name
